Feedback on Front End

- Primary Library
  - Overall Website Edits
  - index.astro
  - master-library.astro
  - Data Resources
  - Interactive Map
- "Example Community Library" - Maybe we build for Knox Co and link to it as example
  - Individual CDL Entry Page
  - Composition of Community Data Library

Primary Library

Overall Website Edits

- Address "Home" Navigation issue
- Fix/delete the GitHub action that keeps failing
- On the navigation, "Data Resources" needs to be a dropdown
    - Here we will list "Submit A Data Resource", "Lesson Plans", "Community Activities"
- I renamed pages in the navigation bar, but I didn't carry these through for page and filenames. That will need to be done.
- Please prepare other colors. I like the fonts and general appearance - just don't love the colors. This is a rough logo (you can see this on our github org):

I particularly like the two left-most colors as guides.

index.astro

- Auto-calculate the number of datasets and communities libraries to populate the numbers in the (1) floating stat badges and (2) the stats strip
- Make "about communities" and "for communities" two different colors (something like this - doesn't have to match)

-

master-library.astro

- Change all files and text from "master library" to "complete catalog"
- The different views don't work
    - We might also want a card up top that explains the three views
- The description of Community view says that sensitive topics are excluded, but that's not accurate for community view
- I think we don't need featured (just comment out for now). I'd rather this just be a complete listing of datasets
- These cards should link to a data preview page - not the website itself
    - Hopefully we can use the same data preview page for all libraries
    - Complete catalog = not filtered
    - Community library = filtered for that community's data
- On left-hand sidebar, change "Tag" to "Pedagogical Tag"
    - This should only be visible when Teacher View is selected
- On each dataset card, I'm not sure we need the righthand bit
    - Definitely don't need level: beginner, etc.
    - Might keep updated. Let's ask the backend folks
- On the datasets, the little tags at the bottom. I would like one color to be the theme tags and maybe a second color to be the pedagogical tags (when teacher view is enabled only)
- On the lefthand sidebar, we don't need the resource types at bottom, I think. These are all going to be datasets.
    - This means we can ditch the category tag in the cards, too

Data Resources

- This needs to be a dropdown
- DATA RESOURCES (top level)
    - Suggest a dataset (submit.astro)
    - Lesson plans & resources (this is coming next summer)
    - Community workshops (this is coming in two summers)
- Data Resources page probably just has a few cards that explains the three second level pages and links out to them
- About You → "Your Name" has a bit space beneath it we need to get rid of

Interactive Map

- The leaflet map, when you scroll up the page, it scrolls over the top nav bar
- Let's take off the filter and topical search
- Instead, we'll use that box for instructions to drop a pin and see what data is available for your local community
- When folks drop a pin, I want an either left or right sidebar to appear over the leaflet that lists all the datasets in our catalog for that community
    - It can just be a list, might link to preview page, but doesn't have to

"Example Community Library" - Maybe we build for Knox Co and link to it as example

Teacher	Student	Community Member

Composition of Community Data Library

- Community Catalog
- Data Resources
- Suggest a Resource (links them back to master library resource submission page)
